PRINCETON UNIVERSITY

PRESIDENT'S ANNUAL REPORT

DECEMBER 13th, 1906.

GENTLEMEN OF THE BOARD OF TRUSTEES:

I have the honor to submit my annual report for the year 1905-1906.

Since my last report, our colleague Dr. George Macloskie has retired from active duty on the teaching force of the University, after a service of thirty-two years. Dr. Macloskie came to Princeton as Professor of Biology in 1874 from Trinity College, Dublin, and throughout the years which have ensued has constantly grown in our esteem and confidence. His services became of increasing value to the University as the years went by, and he now retires to a well-earned rest,—and yet not to an entire rest. He sought the leisure of retirement from the exacting duties of teacher at this time in order to make sure of an immediate opportunity to complete his portion of our important Patagonian Reports.

The additions to our teaching force this year, though not so numerous as those which I had the pleasure of reporting a year ago, are noteworthy, both in number and in quality.

Dr. Norman Smith, who comes to us from Glasgow University, to succeed Professor Thilly as Stewart Professor of

Psychology, was graduated Master of Arts at St. Andrews University in 1893, and after graduation spent two years in study at the Universities of Zürich, Berlin and Paris. In 1896 he was appointed Assistant Professor of Philosophy at the University of Glasgow. The following year he received the additional appointment of Lecturer in Philosophy at Queen Margaret College. In 1903 he received the degree of Doctor of Philosophy from St. Andrews University. For ten years before coming to us, Mr. Smith had steadily grown in the confidence and admiration, not only of his colleagues at the University of Glasgow, but also of all those who observe the progress of philosophical thought in Great Britain. In him we once more bring from Scotland some of the most vigorous influences of our thought.

Dr. Owen Williams Richardson, Professor of Physics, was graduated Bachelor of Arts from Cambridge University in 1900, having taken First Class Honors in Part I of the Natural History Tripos in 1899, and First Class Honors in both physics and chemistry in Part II of the Natural History Tripos in 1900. The year following his graduation he was elected to the Coutts Trotter Studentship for Research in Physics at Trinity College; in 1902 he was appointed Fellow of the same college; and in 1903 obtained the Clerk Maxwell Studentship for Research in Physics in Cambridge University. In 1904 he received the degree of Master of Arts. At the same time that he matriculated at Cambridge University, he matriculated also at London University, where he earned similar honors in his chosen branches of study, and from which he received in 1903 the degree of Doctor of Science, for research in physics. At the time of his appointment here he was a Fellow and Sub-Lector of Trinity College, Cambridge, Director of natural science studies at Corpus Christi College, Cambridge, Clerk Maxwell Student in the University, and a demonstrator in the Cavendish Laboratory.

Dr. Augustus Trowbridge, Professor of Physics, studied at the Columbia School of Mines from 1890 to 1893, leaving without a degree to accept an engineering position at the World's Columbian Exposition in Chicago. In 1894 he entered the University of Berlin as a student of mathematics and physics, and in 1898 received from that University the degree of Doctor of Philosophy. The same year he was appointed Instructor in Physics at the University of Michigan. From 1900 to 1903 he was Assistant Professor of Physics at the University of Wisconsin, a position which he left for a single semester to study at the University of Bologna, returning to fill a full professorship at Wisconsin, the chair which he held until he came to us.

Dr. Edward Plimpton Adams, Assistant Professor of Physics, was graduated Bachelor of Arts, from Beloit College in 1899. From 1899 to 1901 he was a student in the graduate school of Harvard University, receiving from that University in the latter year the degree of Master of Science. From 1901 to 1903 he held the appointment from Harvard as John Tyndall Scholar, and pursued studies at the universities of Berlin, Göttingen, and Cambridge. In 1904 he received from Harvard the degree of Doctor of Philosophy. Since 1903 he has been Instructor in Physics at Princeton, where he has completely established himself in our confidence.

Dr. Philip Ely Robinson, who is also this year promoted from an Instructorship in Physics to an Assistant Professorship, was graduated Bachelor of Arts from Princeton University in 1898. He pursued special studies in science at Princeton from the time of his graduation until 1900, holding during the first of his two years of graduate study here the Class of 1861 Fellowship in Experimental Science, and receiving at the end of his fellowship year the degree of Master of Arts. From 1900 to 1903 he studied at Berlin and Giessen, receiving the degree of Doctor of Philosophy from the latter University

in 1903. Since 1903 he has been Instructor in Physics at Princeton.

Mr. Hereward Lester Cooke, Assistant Professor of Physics, was graduated from McGill University in 1900, taking first rank honors in philosophy. From 1901 to 1903 he was Demonstrator in Physics at McGill, and in 1903 he received from that University the degree of Master of Arts. In the same year he was awarded the 1851 Exhibition Scholarship, placed at the disposal of McGill University, an appointment which he held by special extension for three years, during which period he was engaged in research work at the Cavendish Laboratory at Cambridge University. In 1903 he was also awarded the Advance Student Exhibition, offered by Emanuel College, Cambridge. He thus comes to us directly from the Cavendish Laboratory.

Mr. Walter Maxwell Adriance, Preceptor in History, Politics and Economics, was graduated Bachelor of Arts from Yale University in 1900. During the two years following his graduation he taught French and German in Westminster School at Simsbury, Connecticut. The next three years he spent in graduate study in the Department of Economics at Yale, from which University he received in 1903 the degree of Master of Arts. During the academic year 1905-1906 he served as Instructor in Debating at Yale, and as coach of the debating teams.

Dr. Edgar Dawson, Preceptor in History, Politics and Economics, was graduated Bachelor of Arts from Davidson College, North Carolina, in 1895, and Master of Arts from the University of Virginia in 1897, holding at the University of Virginia the John Y. Mason Fellowship in History. From 1897 to 1899 he was Principal of New Providence Academy in Virginia; from 1899 to 1900 he was a student of history, English philology, and modern philosophy at Heidelberg University, and at Leipzig University from 1900 to 1902,

receiving from that University in 1902 the degree of Doctor of Philosophy. Since 1902 he has been Professor of History and English at Delaware College, Newark, Delaware.

Dr. William Starr Myers, Preceptor in History, Politics and Economics, was graduated Bachelor of Arts from the University of North Carolina in 1897. During the three following years he was a graduate student in History, Politics and Economics at the John Hopkins University, receiving from that University in 1900 the degree of Doctor of Philosophy. From 1900 until the present year he was Master of History in the Baltimore Country School for Boys.

Dr. Henry Russell Spencer, Preceptor in History, Politics and Economics, was graduated Bachelor of Arts from Colby College in 1899, Master of Arts from Columbia University in 1901, Doctor of Philosophy from Columbia University in 1905, holding the University Fellowship in American History at Columbia during the year 1902-1903. After 1903 he was not in residence at Columbia, but served as Instructor in American History and Political Science (1903-1905) in the Ohio State University. In 1905 he was advanced to the rank of Assistant Professor.

Mr. Charles Rufus Morey, Preceptor in Art and Archaeology, was graduated Bachelor of Arts from Michigan University in 1899, Master of Arts in 1900. From 1900 to 1903 he was Fellow in the American School of Classical Studies at Rome, being also during two of those years Buhl Fellow of the University of Michigan. From 1903 to 1904 he held the Fellowship in Archaeology at Princeton; from 1904 to 1905 he was Instructor in Classics at the Princeton Preparatory School; from 1905 to the present year Instructor in Classics in Princeton University, a position from which he is now promoted to be Preceptor in Art and Archaeology.

Dr. Morris William Croll, Preceptor in English, was graduated Bachelor of Arts from Pennsylvania College, Gettys-

burg, Pennsylvania, in 1889. After teaching several years he entered the senior class of Harvard University, from which in 1894 he received the degree of Bachelor of Arts, and in 1895 the degree of Master of Arts. For four years he was Instructor in English in the University School at Cleveland, Ohio, and for two years studied as Harrison Fellow at the University of Pennsylvania, from which University, in 1891, he received the degree of Doctor of Philosophy. From 1901 to 1905 he occupied the position of Associate Editor of the revised edition of Worcester's Dictionary, planned by Mr. Lippincott. In 1895 he came to Princeton as Instructor in English, a position from which he is now advanced to be Preceptor.

Dr. Lewis Wardlaw Miles, Preceptor in English, was graduated Bachelor of Arts from the Johns Hopkins University in 1894. After graduation he studied medicine for three years, at the University of Maryland, receiving in 1897 the degree of Doctor of Medicine. After graduating in Medicine he turned again to study at the Johns Hopkins University, devoting his attention to French, German and English, and receiving in 1902 the degree of Doctor of Philosophy. From 1903 to 1905 he served as Instructor in German in the Baltimore Country School for boys, from whence in 1905 he was invited to a instructorship in English at Princeton. He is this year promoted to membership in the faculty as Preceptor.

Dr. John Newton Beam, Preceptor in Modern Languages, was graduated Bachelor of Arts from Princeton University in 1896, and immediately after graduation became Instructor in German and French at the Princeton Preparatory School, where he remained three years. In 1899 he received the degree of Master of Arts from Princeton, and became an Instructor in the University, teaching German during the year 1899-1900, and French during the year 1900-1901. He then went abroad for study, and after two years at the University of Jena, received from that University the degree of Doctor of Philos-

ophy. In 1903 he returned to Princeton as Instructor, and has served the University continuously since that time.

Mr. Varnum Lansing Collins was graduated Bachelor of Arts from Princeton University in 1892, Master of Arts in 1895. During the year following his graduation he was Professor of Classics at Moore's Hill College, Indiana; the year 1893-1894 he devoted to the study of modern languages at Princeton; in 1894 he accepted the position of Secretary to the University Librarian, and he has continuously served the University in connection with the administration of the Library from that time until his present appointment as Preceptor in Modern Languages, first as Secretary to the Librarian (1894-1895), then as Assistant in charge of circulation (1895-1896), and finally for ten years (1896-1906) as Reference Librarian.

The following new appointments have been made in the staff of Instructors:

In History, Politics and Economics, Walter Lincoln Whittlesey, A. B., University of Oregon, who has had five years experience in teaching at the University of Oregon and at Cornell University. *In English*, George Dobbin Brown, A. B., Johns Hopkins University, 1895, Ph.D. 1901, recently English Master in the Country School for Boys, Baltimore; Maxwell Struthers Burt, A. B., Princeton University, 1904, graduate student at Munich, 1904-1905, at Oxford University, 1905-1906; Charles William Kennedy, A. B., Columbia University, 1902, Ph.D. Princeton University, 1906, having been Scribner Fellow in English 1905-1906; and Herbert Spencer Murch, A. B., University of Oregon, 1898; Doctor of Philosophy, Yale University, 1906; Assistant in English in the academic faculty, Yale University, 1901-1906. *In Modern Languages*, Sigmund Gottfried Spaeth, A. B., Haverford College, 1905; A. M. 1906, and Teaching Fellow in English, 1905-1906; and Donald Clive Stuart, A. B., University of Michigan, 1903, A. M. 1904, graduate student at Columbia University,

1904-1905, and at the Sorbonne, 1905-1906. *In Mathematics*, Robert Lee Moore, B. S. and M. A., University of Texas, 1901; Ph.D. University of Chicago, 1905; Assistant Professor of Mathematics, at the University of Tennessee, 1905-1906. *In Physics*, Philip Thomas, B. Sc., Ohio State University, 1904, and from 1904 to 1906 in the employ of the Western Electric Company, Chicago. *In Chemistry*, Walter Daniel Bonner, B. S., Nebraska Wesleyan University, 1906; and John Davison Rue, B. S., Princeton, 1906; *In Civil Engineering*, Ralph Andrew Barry, C. E., Princeton, 1906; and Elliott Chipman Brown, C. E., Princeton, 1904.

Our new method of instruction has now had a full year's test, and has stood the test most satisfactorily. It has produced more and better work; it has systematized and vitalized study; it has begun to make reading men; and it has brought teachers and pupils into intimate relations of mutual interest and confidence. I speak of it as a "system" of instruction, but we have not given it the symmetry or the uniform rules of a system. We have sought to preserve the utmost elasticity in its use, in order that the individual gifts and personal characteristics of the Preceptors might have free play. Not only must instruction in each subject have its own methods and points of view, but each instructor must be as free as possible to adapt himself to his pupils as well as to his subject. What is true of all teaching is particularly true of this intimate way of associating teacher and pupil: the method is no more effective than the man who uses it. His whole makeup conditions his success and determines its character. The almost uniform success of last year's work means that the teachers were singularly fitted for the new and delicate task for which they had been selected.

There were marked varieties of success, of course. The new way of teaching demands for its ideal success a very intimate and cordial sympathy between the preceptor and his pupils,

and of course not all of the preceptors have been of the temperament to make close friends of the men they taught. Some are a little too much inclined to be mere faithful task-maskers, the supervisors of their men's work, and the intimacy between them and their pupils is hardly more than the intimacy that must in any case come from such relations of mutual responsibility. Some have succeeded because they stimulated their men; some because they understood and helped them; some because they knew how to hold them to strict and frequent reckonings; some because they interested; others because they had the gift for congenial conference. But amidst all the variety there has been no failure, and the beginning of the second year of the system already shows interesting results in the new attitude of the undergraduates and the manifest fruits of the year of training. Each class shows a distinct stage of advance. It is not merely a year further along in the subject of study, but also a year further along in the ability to study, and in intelligence of approach and facility in work.

I am sure that you will read with interest and pleasure what the Librarian of the University says, in the report hereto appended, of the effects of the new system as shown in the use of the library. There has been a general intellectual quickening. It followed, of course, from the new requirements of study involved in the new method of instruction that more books would be used and the library more habitually resorted to, but something much more interesting than that has taken place. The voluntary use of the library has very greatly increased. Required work has produced a general inclination and desire to read, which has been gratified by reading of all kinds. Moreover, the too great engrossment of the teacher in his work with the men assigned him, to the exclusion of original work of his own, which we so much feared, has not as a matter of fact followed the introduction of the system. The Librarian informs us that the library was never before so much

used for research and original study. I think that these facts should give all who are interested in the advancement and distinction of the University peculiar gratification.

The most noteworthy change affecting the subject matter of the undergraduate course of study which was made during the year, was the introduction of a special honors course in mathematics and physics. When the present course of undergraduate study was under discussion in the faculty, it was generally agreed that the more serious students who wished to be candidates for honors in some special field of study ought to be offered an opportunity for more intensive and definite study in their departments, after passing through the drill of freshman and sophomore years, but it was thought best to postpone the formulation of such special courses until the new scheme of study had been tried in its entirety for a little while, and until there should be special opportunities of instruction because of increases in our staff or equipment, or because of the disclosure, as we gained experience, of special opportunities for a suitable rearrangement or adaptation of courses. Towards the close of the last academic year such a special opportunity seemed to have disclosed itself in the mathematical and physical studies. Our staff of instruction in those subjects has been notably strengthened. The study of the preparatory mathematics runs far back into the school years, and our undergraduates may be presumed to have ascertained their tastes and aptitudes in studies of that kind quite definitely: and the combination of mathematics and physics affords a sufficiently broad and various body of the subject-matter of exact science to render it feasible to arrange for intensive study which shall not be specialization. Moreover, those subjects lie within a field of study which students are not likely to enter from mere whim or taste and without serious purpose,—the purpose of really stretching their minds to consistent endeavour. The faculty therefore consented to the formulation, somewhat

earlier than would otherwise have been deemed wise, of an honors course in mathematics and physics.

The course begins in sophomore year. All sophomores are required to take a three-hour course in general physics. Those who seek honors always take the elective course in mathematics. Under the new arrangement those who seek honors are required to take, not the ordinary three-hour elective in mathematics, but a four-hour course designed for the purpose; and in order that they may have more time for these special studies, they are released from one of the additional elective courses which they would otherwise have been obliged to select. Thus they take, as all sophomores do, the required course in logic and psychology and, if they are candidates for the degree of Bachelor of Arts, the required Greek of the first term and the required Latin of the second term; and they are obliged to add to their elective mathematics only one other elective study, if they are candidates for the B. S. or Litt. B. degrees, and if candidates for the Bachelor of Arts degree, take no elective but mathematics. Their whole number of hours is thirteen instead of fifteen. In junior year the concentration becomes more complete. Out of a list including a course in pure mathematics, a course in analysis, a course in applied mathematics (mechanics in junior year, electricity and magnetism in senior year), a course in theoretical physics and a course in experimental physics, each candidate for honors is permitted to choose three consecutive courses, his senior courses being also consecutive with his junior courses, and he is obliged to add to these nine hours of work in mathematics and physics only one additional elective. This additional elective must, however, lie entirely outside the field of mathematics and physics. His total number of hours is twelve instead of fifteen.

It is hoped that this new arrangement of studies for men seeking honors in this particular field will encourage at least

a small body of specially qualified men to attempt serious achievement in exact science, and the members of the faculty directly concerned by the change have entered upon the new undertaking with a great deal of enthusiasm.

The year which has passed since my last report has confirmed us in our confidence that our plans for a graduate college are not only wise but also sure to be singularly fruitful along the very lines which are most characteristic of them. Instead of being scattered here and there through the town, wherever they could find lodgings, a large number of our graduate students have been living together at Merwick, and their close and constant contact with one another, their free life, their refined and agreeable environment have not only added greatly to their pleasure, but have brought, as we expected, a contagion of high ideals and of scholarly ambitions whose influence it has been very delightful to witness. The life at Merwick under Mr. Butler and Dean West has proved another of those innovations which recent years have witnessed at Princeton, which were not experiments but parts of a development along well thought out lines.

It is the more gratifying, therefore, that Mrs. Josephine E. Thompson Swann should have enabled us, by her generous bequest, to take immediately the next step, and enlarge this community life of our graduate students to something like an adequate scale. Mrs. Swann's bequest will amount to fully \$250,000, and will be paid into the University treasury about the first of January next. Mrs. Swann directs by her will that this sum be devoted "as soon as practicable, to the erection and construction upon the grounds of the said University of a building to be known as the John R. Thompson Graduate College of Princeton University; the said building to contain sitting and sleeping rooms for professors and students, with a dining hall, kitchen and the necessary appurtenances in a portion of the building entirely separate and apart from such

sitting and sleeping rooms. The living rooms shall be rented at the best prices they will command . . . and the income derived from such rentals, after deducting the cost of maintaining said building, shall be devoted to the maintenance of as many fellowships of \$400 each as the funds will provide. These fellowships . . . shall be given to Bachelors of Arts of the male sex, of high character and ability, who would not otherwise be able to continue their studies at the University. The fellows, to a number not exceeding thirty, shall have unfurnished rooms in the building free of rent. The tuition fees of the fellows shall be remitted by the Trustees as a condition of this gift . . . The said fellowships shall be bestowed upon Bachelors of Arts who are engaged in scientific and literary research other than that directly connected with professional studies, so-called;" shall be known as The John R. Thompson Fellowships; and in awarding them "Bachelors of Arts of Princeton University shall have preference in the order named: First, from the Borough of Princeton: Second, from the County of Mercer, and Third, from other parts of the State of New Jersey, provided always that the attainments of such persons are fully equal to those of other applicants. In default of such candidates, the appointments are to be open to male Americans holding the degree of A. B. from any approved college or university. No one of said fellowships shall be given to or held by a married man." It is further directed that resident fellows of the college shall eat at the common table and pay the charges fixed therefor.

These provisions agree in every substantial particular with the plans already made for the development of graduate life at Merwick, and the beginnings made there will very easily lend themselves to this expansion. We may congratulate ourselves that we have thus immediately at hand the opportunity to build a graduate college which may be so readily and so consistently combined, as first a model and then an auxiliary,

with the great graduate college for whose erection and endowment we are so eagerly seeking funds. Wisely planned and placed, Thompson College will always stand as one of the ornaments of our campus, and as a most interesting evidence of Mrs. Swann's generosity and foresight. It is a significant link in our chain of consistent development.

The number of graduate students, which was last year 106, is this year 115. Of this number 38 are devoting themselves exclusively to graduate study as against 33 last year, and 77 are combining graduate study in the University with graduate work in Princeton Theological Seminary. Of the 38 regular graduate students 11 are in residence at Merwick and sixteen take their meals there. When Thompson College is completed, we shall have accommodations for a very much larger proportion.

The following table shows the number admitted to the University as undergraduates this year, as compared with last:

	1905	1906
Freshmen without conditions.....	134	146
Freshmen with conditions.....	277	202
Specials.....	48	13
Seniors.....	5	2
Juniors.....	3	4
Sophomores.....	8	11
	475	378

Of the freshmen admitted upon examination in 1905, twenty for one reason or another did not come. Of those admitted this year twenty-six did not come. So that the corrected figures for the two years are: 1905, 455; 1906, 352. The actual number of freshmen who entered the University in 1905 was 391, in 1906, 322, a loss of 69 in the entrance figures of this year as compared with those of last year. To

these statistics the following should, for the full information of the Board, be added:

	1905	1906
Examined but not admitted.....	69	72
Preliminary and partial examination	437	455

There was thus a gain of eighteen in the number of preliminary and partial examinations this year as compared with a loss of forty-eight last year, as compared with the year preceding. The comparative stability of these latter figures and the falling off in entrance indicate, so far as we can ascertain, the same thing. Formerly, because our examinations were often less difficult or our standards less rigidly maintained than those of other universities of the same rank and reputation, a large number of ill-prepared and unstudious boys came to Princeton from the secondary schools, particularly the private schools. Now, it being generally understood that our requirements are rigidly insisted on and that poor preparation means almost certain failure at the term examinations after entrance, none but boys who can hope to meet our requirements are inclined to attempt our tests. Slowly the number of well-prepared applicants is increasing. You will notice that the proportion of the present freshmen admitted without conditions is much larger than last year, and the figures given do not indicate the full extent of the improvement, because the proportion of very lightly conditioned men is not indicated. The best secondary private schools are sending a larger number of their men to us, but such changes are always slow. The tide will take several years to turn, but with the improving quality of our students, we are quite willing to wait.

The total undergraduate enrollment of the University is 1236 and was last year 1280, a decrease of forty-four. The

number of instructors of all grades has increased since last year from 153 to 164, an average of about one teacher to seven and one-half pupils.

Patton Hall was completed during the summer and is now occupied. It seems to be in every way excellently adapted to its uses, and, with the addition to Blair Hall and the other dormitories now in prospect through the generosity of other classes, bids fair somewhat to lighten our burden with regard to the housing of the undergraduates.

The construction of the addition to Blair Hall has been delayed by the slowness of one of the contractors in supplying the stone for the interesting skewed arch which is to span the roadway, but the other portions of the building are progressing more satisfactorily and are already under roof. They constitute as satisfactory an addition to the beautiful line of Blair Hall as we had expected, and will add greatly both to the charm and to the convenience of that part of the campus.

The central portion of McCosh Hall is now under roof, and it is hoped that the class rooms which it contains will be ready for use by the beginning of the second term. The other portions of the building go forward more slowly. As the walls of the building near completion they show an unusual beauty of form and proportion, and promise to make this noble memorial to our beloved one-time leader one of the finest ornaments, as it will be one of the most useful buildings, of the campus.

The Treasurer's Report will be found this year to be in a more convenient form for reference than hitherto. As now formulated, it forms a very plain and satisfactory exhibit of the resources and the expenses of the University. The item which will no doubt chiefly attract your attention is the \$120,538 received through the Committee of Fifty. The splendid work being done by this committee is a truly extraordinary evidence of the loyalty and generosity of the alumni

of the University. And yet the Committee feels that their work is but just begun and that their efforts "to capitalize the good will of the alumni" will from year to year show yet much larger results. It is immensely encouraging to feel that the strength of the alumni is behind us in the execution of our plans for the development of Princeton. The total gifts for immediate expenditure, including those received through the Committee of Fifty, amounted to \$158,071.27, and besides this there was received for endowment and permanent investment \$365,451.31, making the total gifts for the year \$523,522.58. The total income for the year, including the gifts for immediate expenditure, was \$568,131.06.

During the year three of our professors emeriti have been put upon the roll of the Carnegie Foundation for the Advancement of Teaching, to receive retiring allowances. This admirable foundation bids fair to be of the highest usefulness in relieving college teachers of the anxieties of old age, and will certainly render the administration of a system of retirements henceforth comparatively simple.

Respectfully submitted,

WOODROW WILSON.

TREASURER'S REPORT

1905-1906.

SUMMARY OF RECEIPTS FOR YEAR 1905-1906.

	<i>Schedule</i>	<i>General Funds</i>	<i>Special Funds</i>	<i>Gifts</i>	<i>Total</i>
Receipts for General Purposes.....		\$281,496 67		\$120,538 00	\$402,034 67
Education Funds.....	A				91,275 28
Library Funds.....	B		\$91,275 28		91,275 28
Grounds and Buildings Funds.....	C		14,862 91		14,862 91
Miscellaneous Funds.....	D		3,090 00	10,632 11	13,722 11
Prize Funds.....	E		4,298 13	1,695 99	5,994 12
Scholarship Funds.....	F		2,508 19		2,508 19
Fellowship Funds.....	G		1,037 91	400 00	1,437 91
Charitable Funds.....	H		5,997 54	204 82	6,202 36
Sundry Receipts.....	I		2,672 36	2,100 00	4,772 36
Gifts for Special Purposes.....	J		400 00		400 00
	K	2,420 80		61 62	2,482 42
	L			22,438 73	22,438 73
Total Receipts.....		\$283,917 47	\$126,142 32	\$158,071 27	\$568,131 06
Total Disbursements.....		423,886 41	100,391 67	31,278 34	555,556 42
Surplus.....			\$25,750 65		\$25,750 65
Deficit.....		\$139,968 94			\$139,968 94
Surplus, Balance July 31, 1906.....					\$12,574 64
Add Balance Aug. 1, 1905.....					28,908 26
Less Expended Van Winkle Fund.....					\$61,758 66
Balance on Aug. 1, 1906.....					32,850 40
In addition to above there have been received Gifts of Cash, Real Estate, Bonds, etc., for Endowment Account, per Schedule X.....					\$41,482 90
					<u>\$305,451 31</u>

SUMMARY OF DISBURSEMENTS FOR YEAR 1905-1906.

November 24, 1906.

WOODROW WILSON, L. L. D.,
President of Princeton University.

SIR:—

In accordance with your request, we submit the following memorandum of Library activity for the year of 1905-6:

TOTAL BOOKS IN THE LIBRARY.

Bound volumes.....	206,275
Pamphlets.....	53,000
Portraits, engravings, etc.....	677
Autographs, manuscripts, etc.....	1,959
Maps.....	180
Broadsides.....	665
	<hr/>
Total.....	262,756

ACCESSIONS 1905-6.

Bound volumes.....	10,542
Pamphlets.....	1,854
Portraits, engravings, etc.....	121
Autographs, manuscripts, etc.....	577
Maps.....	30
Broadsides.....	336
	<hr/>
Total.....	13,460

Of the bound volumes of accessions above mentioned 5,752 are by gift, 4,790 by purchase.

GIFTS OF MONEY.—Many of the more noteworthy money gifts to the library are included in the tables of accounts appended. These include the liberal gifts of Geo. A. Armour, '77, to the Classical Seminary, of Mr. and Mrs. M. Taylor Pyne to the Historical Seminary,

\$300 for fittings of the Economic Seminary, \$1,500 for Mathematical Seminary, \$500 from C.W. McAlpin, '88, for Princetoniana, considerable sums for Romance and English Seminaries, and \$492 for the Political Seminary. Other gifts which do not appear in the accounts, either being paid outside or due after August 1st, are \$1,000 from Arthur H. Scribner, '81, for books on Latin America, considerable additions to the endowments of the Romance and Germanic Seminaries by the classes of '90 and '91 not yet paid over, new fittings for the Manuscript and Coin Room provided by Robert Garrett, '97, and special fittings for Periodical and Binding Rooms provided by M. Taylor Pyne, '77. The gift by the late Mrs. Chas. E. Green of \$10,000 in trust, the income of which is to be devoted to the maintenance and increment of the Chas. E. Green Memorial library, is also announced.

GIFT OF BOOKS.—The total gifts of books were 5,752 volumes; these include 699 volumes on music from John W. Garrett, Esq., '95, 485 volumes from Dr. Hiram Bingham, preceptor in the University, of books relating to Latin America, and two lots of 76 and 44 volumes respectively from J. S. Morgan, '88, and R. M. Patterson, '76, containing books of very exceptional beauty and rarity; the book on Jade presented by the Bishop estate also deserves special mention. The following gifts are also noteworthy either for size or value: V. L. Collins, '92, 36 volumes, H. A. Garfield, 27 volumes, C. W. McAlpin, '88, 127 volumes, M. Taylor Pyne, '77, 249 volumes, J. S. Pearson, '40, 184 volumes, C. E. Scribner, '75, 129 volumes, C. A. Young, 175 volumes, S. M. B. Long, 132 volumes, A. S. Rowland, '84, 274 volumes, P. Van Dyke, '81, 48 volumes, G. M. Priest, '94, 25 volumes, O. D. Kellogg, '99, 35 volumes, C. S. Robinson, 163 volumes, Hon. Grover Cleveland, 43 volumes, R. E. Schirmer, '80, 14 volumes, W. Libbey, '77, 60 volumes, U. S. Government, 283 volumes, Mrs. C. E. Green, 15 volumes, W. F. Harris, 96 volumes, Col. J. J. McCook, 61 volumes. The remaining 2,205 volumes also contain many items of considerable interest.

In the deposited class there has been an addition of remarkable interest to the deposited manuscripts of the Garrett collection, and nearly 3,000 autograph documents relating to Spanish American history deposited by Dr. Hiram Bingham.

It should also be mentioned that Whig Hall decided in June to deposit some 12,000 volumes from its library in the University library for the general use of the University; these books were transferred during the summer but too late to appear in the records of 1905-6.

The above list includes books purchased by the library on special gifts of money but not those purchased from endowments or systematic annual gift.

CIRCULATING DEPARTMENT.—The total number of books given out was 26,281, an increase of 1,805 over last year. The kinds of books taken were as follows:

History, biography and travel.....	5,676
Literature and language.....	7,840
Fiction.....	6,643
Philosophy, theology and education.....	1,312
Political science, economics and jurisprudence.....	1,963
Mathematics, physics and natural science...	1,583
Art and music.....	532
Useful arts and technology..	46
Periodicals.....	686
	26,281

Of the above 21,387 were two week books, 4,894 one day books.

CATALOGUE DEPARTMENT.—The total number of titles handled this year was 10,266, involving 25,016 new cards as compared with 10,933 works, involving 27,185 cards of last year and 10,305 works involving 24,000 cards the previous year. 33 1/10 per cent. of the cataloguing was done with the use of the printed cards of the library of Congress as compared with 29 1/2 per cent. of the previous year.

CATALOGUING DEPARTMENT, SHELF DIVISION.—In this division there have been filed, or altered, 36,938 shelf cards and 37,990 author cards; 2,467 additional guide cards have also been prepared and filed, 916 books were transferred from one location to another; this item has not heretofore appeared in the report; it refers chiefly to books which have become out dated in the Chancellor Green or the seminary libraries and are removed to the stack, a process which involves changing the marking inside and out, and the marking on author, subject and shelf card.

CATALOGUING DEPARTMENT, SHELF DIVISION, BOOK CENSUS.—The usual summer book census shows a gratifying situation as regards the books missing and especially in the matter of the annual average actual loss. The report of the Superintendent of Shelves indicates that of the books missing in 1904, seven years after reclassification, only 119 are still missing, or in other words, that our final average net loss for seven years is not more than seventeen. The lowest annual loss in other institutions so far as is known to us is forty-eight.

PRINTING DEPARTMENT.—From 158 forms kept in type, electrotype and linotype, 129,660 copies have been printed as against 109,705 of last year, in addition to this about 75 special jobs, labels, notices and the like, have been set up and printed, The linotype finding lists of the seminary libraries have been kept up and a combined edition printed.

BINDING DEPARTMENT.—This department, conducted as a cash account, has bound 1,525 books, 892 pamphlets, has repaired more or less, 3,266 volumes and gilded the numbers on to the back of 6,942 volumes, this has been done at a total expense of \$1,804.06 gross, or \$1,570.83 provided by your appropriation, by money out of the library account, binding for seminaries and special accounts and a few books bound for professors or others. The showing of the year is especially gratifying in that the work was paid for on the basis of the old prices, although during the year cost of material has increased greatly and prices for binding generally have gone up.

PURCHASE DEPARTMENT, GENERAL ACCOUNTS.—The receipts and expenditures of 1905-6 have been as follows:

Balances from 1905-6 \$8,773.97, receipts \$47,315.35, expenditures \$46,534.73, balance to 1906-7 \$9,554.59.

The expenditures were: for books and binding \$17,709.43, for salaries \$18,600, building, furniture, care of library, printing, stationery, and miscellaneous expenses \$10,255.30.

STAFF CHANGES.—The year has been one of some difficulty in the matter of staff changes. The loss of the reference librarian has necessitated the transfer to his position of the chief cataloguer, and this, with the loss of the first and second assistants and two others in minor positions, has made a complete reorganization of the cataloguing department desirable. It is now administered by making Mr. C. A. George practically executive assistant for three departments and introducing Mr. A. D. Savage to serve as what may be called a reference cataloguer.

The loss of Dr. Littman has not only deprived us of a very able curator of manuscripts but has also lost to us his courteous and competent advice in the cataloguing of oriental books.

THE PRECEPTORIAL SYSTEM IN THE LIBRARY.

The working out of the Preceptorial System in its library relations has led to results highly gratifying from the library standpoint.

16,457 volumes were used by the preceptees during the year in the

reading room. It had been expected that the extra use of the books recommended in the courses would diminish the general use of the library for reading purposes, but the contrary was the case. There was an increase in student circulation. Farther than this there was an increase observed in the reading room use, both in browsing and in the use of reference books. It was found, in brief, that being in the library for the use of the recommended books tended to get men into the habit of using the other books more freely.

This net result is one unexpected in degree and has been recognized in the Library Associations and in the press as of unusual significance in library economy.

The chief and most characteristic object of library endeavor is to get men to read the best books and into the habit of reading. Many fitful efforts to do this have been made in the past among the colleges by establishing Professors of Books, by lecture courses from the Librarian, by so called Library courses and the like, but these methods have never had any practical results save to reinforce and voice the feeling that this is the real object of the Library. The lack of fruitfulness has been universally recognized as chiefly due to the fact there was only a small amount of time and energy which must be distributed over a large area of students. It is a matter of extraordinary gratification therefore, to wake up suddenly to the fact that the best ideals of all modern thinkers in the matter of training to reading and to the use of the library have been realized overnight without special exertion, and as a sort of by-product of the new system. This system, by its very nature, furnishes a large corps whose chief concern is to direct men to the best books and see that they read them. In their very process of doing this they guide to the best method of reading as well as to the best reading, and fulfill beyond the most sanguine hopes ever held out from the other standpoint the precise ideal after which librarians have been striving.

It is a matter of interest also to note that the scientific use of the library has been increased rather than diminished. It was predicted that the absorption of the preceptors by reason of their wide lines in precepting and many hours of teaching would preclude scientific work on their part, but, on the contrary, there has been a remarkably increased active use of the library by reason of the demands of preceptors working on special themes, and there is every reason to suppose that as the preceptors become more and more familiar with their ordinary teaching material from year to year this scientific use will increase. There certainly has never been so active a demand on the part of the University for the tools for special work as at the present time. Whether the facts of the year prove that the broadening and deepen-

ing of the preceptors own habitual field of thought more than compensates for the lack of specialization in ordinary teaching in the preparation of soil for the production of scientific work (as may well be expected) or not, they at least show that in the library, the net gain in cultural use has not been at the expense of scientific use.

NEEDS.—The most obvious need at the present time is \$5,000 a year for the purchase of books which shall fill in the gaps, especially for subjects not provided for by special endowment. There is also, the Librarians feel, some danger that unless they are able to reward special services with increase of salary now and then, and add a little to the force as the work expands, there will be some sacrifice in quality to meet the absolute demands of quantity.

Respectfully submitted,

E. C. RICHARDSON, *Librarian.*

J. S. MORGAN, *Associate Librarian.*
